About The Writer	24

The solos in this book are based on chord progressions from tunes considered "standards" in the jazz repertoire. Some are newly composed, while others are transcriptions of real-time solos that I performed alongside various artists on recordings. This collection of jazz solos for bass is designed for either acoustic or electric bass, pizzicato or arco. Articulation, dynamics, and slur markings are provided. The solos work equally well with or without a rhythm section, and chord symbols are provided. *Hawk Talking* is from a recording I did with the Rich Matteson sextet featuring Louis Bellson, on Louis' great tune titled *The Hawk Talks*. Another fun piece we used to play with the TubaJazz Consort was *Shuckin' And Jivin'*, basically a funky high-energy blues form. This particular solo was taken from a recording we did live at the International Tuba Symposium in Washington D.C. circa 1990 on a cd titled *SuperHorns! Oceans* is a transcription of a solo I performed on one of my favorite ballads: *How Deep Is the Ocean* from the album *Bone-i-fied* as performed with the Bill Watrous Quartet.

A few words of wisdom for you as you strive to develop your own voice in music. Just remember when working towards becoming a soloist, to utilize the Boy Scout motto daily and *Be Prepared!* Do your homework. Study chord structures, study scales, and then put the appropriate scales with the appropriate chord, not only in your head but in your fingers. We all dislike practicing scales and arpeggios, but quite frankly, that is mostly what we do harmonically. Therefore practicing them will prove to be quite beneficial to you when you are reaching for that idea you are hearing in your head. Couple your technique with some rhythmic variance and you're on your way. However, do not forget the one key ingredient needed in your trek towards individuality...listening!!!

Most importantly, listen to the great master musician/soloists which we are so fortunate to have on recordings. Jazz is an aural language and much that we do cannot be written down completely, or accurately for that matter. There are so many little nuances to the language that you need to place into your vocabulary. Listen to the great acoustic and electric bassists for certain, then listen to everyone you can possibly find on recording...i.e. trumpeters, saxophonists, pianists, drummers, guitarists, trombonists, et. al. Everyone has a voice and you should strive to create your own as well. Keep in mind the following adage when working on your own uniqueness in jazz: it is difficult to know where you are going if you do not know where you came from. The great masters on recordings can lend you significant insight to where you want to go.
